Environmental StoneWorks— Your Vision Realized From Start To Finish

Environmental StoneWorks is the **ONLY** national manufacturer and installer of stone veneer so you have one point of responsibility from start to finish for all your projects.

For this reason, Environmental StoneWorks was selected as the stone veneer provider of choice to complete the aesthetic vision of The NAHB 2012 New American Home. Environmental StoneWorks collaborated with the project's architects and designers to create a stone veneer—unique in both shape and color—that simply did not exist in the market before this project.

Osceola Prairie Stone was created and manufactured in Atlanta, GA, one of Environmental StoneWorks' five national manufacturing facilities and installed by its own local, highly trained, and skilled craftsmen whose installation techniques ensure complete satisfaction and maintain a safe job site. No matter how beautiful the stone may be, if it's not installed right, it won't look right. Not only did Environmental StoneWorks exceed

the architect's manufacturing and installation expectations, but architectural plans were redesigned to include additional internal and external walls to showcase the beautiful stone.

Simply The Best Choice For Any Project

Environmental StoneWorks' continued investment in technology, safety programs, equipment, and people makes it the best choice for any project. With bonding capabilities up to \$4 million and over 30 years of industry-leading experience, Environmental StoneWorks is a reliable partner for any general contractor, builder or architect. In addition, all products are ICC-ES certified and conform to the latest AC-51 specifications.

Environmental StoneWorks' products are regionally designed and manufactured, which reduces cycle times and delivers excellent customer service and support from start to finish. Regional coverage also helps builders to earn valuable LEED credits.

Environmental StoneWorks delivers more value to its builder/architect customers and actively supports the industry through its involvement in MVMA, NAHB, AIA, Built Green and many other local industry associations.

Be sure to visit Booth W3014 at the 2012 NAHB International Builders' Show February 8–11 and see for yourself the exciting new products that are helping builders and architects alike realize their vision from start to finish.

A key aesthetic feature to The 2012 New American Home is the exterior stone facade. Manufactured specifically for this project, the stone provides a very modern feel even though its design was inspired by stone used in the classic architecture of the '60s and '70s.

The same Osceola Prairie Stone was used on the built-in BBQ and kitchenette as well as the surrounding 6' perimeter wall, which acts as the perfect canvas to highlight the texture of the plants and foliage.

The exterior stone was expanded into the gallery/dining area. The stone's color variations and texture provide a wonderful backdrop for the artwork.
