

## The Toughest Stone Out There

The quality of Environmental Stoneworks manufactured stone veneer has been evaluated and approved by an independent third party agency, the ICC Evaluation Service, utilizing the highest standards. We are proud to say that we are the first manufacturer of stone veneer to meet the strictest acceptance criteria in the industry, AC51 (March 2008). Our report number is ESR-2380 and is available on-line at [www.icc-es.org](http://www.icc-es.org).

**Independent Product Testing** - finished products have been tested, at an independent testing laboratory, for product strength, bond strength and freeze/thaw resistance, just to name a few. Environmental Stoneworks' test results far exceed AC51 requirements and are available upon request.

**Daily Quality Assurance** - concrete, aggregate, mixes and finished products are evaluated daily, in compliance with ASTM standards. This enables us to fine tune product mixes and manufacture only the highest quality product for our customers.

**Rigorous Documentation** - per ICC Evaluation Service AC10 criteria, proper quality documentation is strictly followed. The Environmental Stoneworks Quality Manual outlines our high expectations and ensures that we provide our customers with the best product possible.

**Plant Inspections** - an ICC-ES representative conducted a qualifying inspection to ensure compliance with AC51 and AC10 requirements. In addition, our corporate Environmental Stoneworks' Quality Assurance Coordinator regularly audits our production facilities.

When selecting your stone veneer, make sure that you choose a manufacturer that has met the stringent requirements of the new AC51 criteria and that has received an evaluation report by the ICC-ES. By choosing Environmental Stoneworks, you can be confident that the product has been evaluated by an independent third party service and that it meets the highest industry quality standards.
